

TITLE

GLASS LAMINATES HAVING IMPROVED STRUCTURAL
INTEGRITY AGAINST SEVERE STRESSES FOR USE IN EXTERNAL
PRESSURE PLATE GLAZING APPLICATIONS

5

ABSTRACT OF THE DISCLOSURE

This invention is an architectural glazing
structure for exterior mounting that is a glass
laminate having enhanced resistance to being pulled
from a frame upon being subjected to severe positive
10 and/or negative pressure loads. This invention is
particularly suitable for architectural structures
having windows that can be subjected to the extreme
conditions prevalent in a hurricane, or window that can
be placed under severe stress from repeated forceful
15 blows to the laminate.
